

CASA ÁLVAREZ, in its commitment to protecting the environment, is certified according to the UNE-EN ISO 14001:2015 standard. The organization has implemented this system to improve its environmental performance by setting improvement targets. Below is information on the results of CASA ÁLVAREZ in 2022:

RESOURCES USED

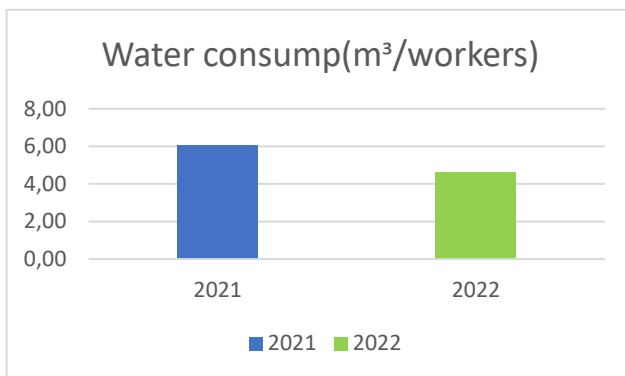

ELECTRICITY CONSUMPTION IN THE OFFICES OF CASA ÁLVAREZ

Our electricity consumption has increased slightly compared to that registered in 2021, having consumed 5.9% more during 2022.

This increase has been due to the recovery of face-to-face work in our offices, since 2021 there were more days of teleworking.

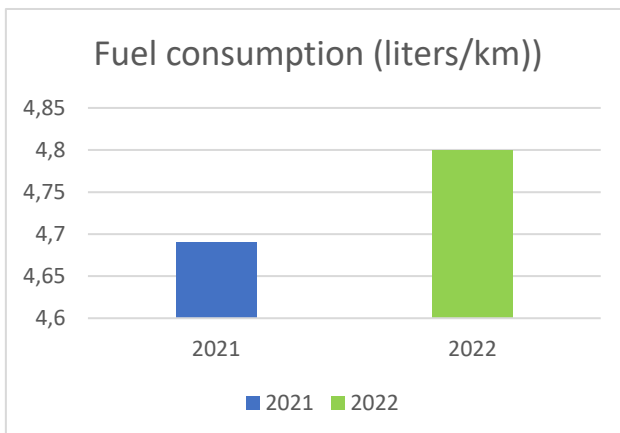

WATER CONSUMPTION IN THE OFFICES OF CASA ÁLVAREZ

In 2022 our water consumption indicator has decreased by 24% due to the application of responsible use guidelines by workers.

en

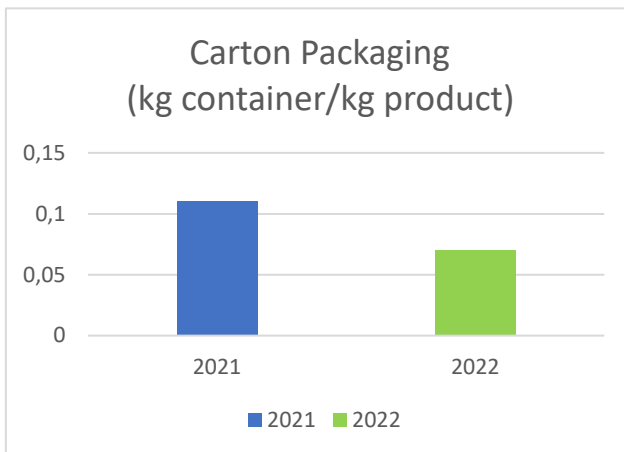

FUEL CONSUMPTION OF COMPANY VEHICLES

In 2022 there was an increase in fuel consumption of 2.3% due to the expansion of our vehicle fleet, to which a new passenger car was added.

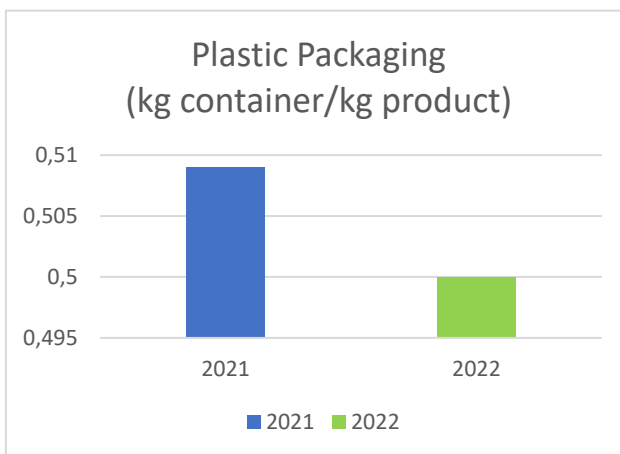

In any case, half of our fleet is hybrid, a choice with which we intend to reduce our impact on the environment.

CONSUMPTION OF CARTON PACKAGING

Although it is true that in absolute terms we have consumed more cardboard in 2022 than in the previous year, the consumption of this type of packaging associated with production has decreased by 36%, as we try to make the most of each shipment to reduce use of this stuff.

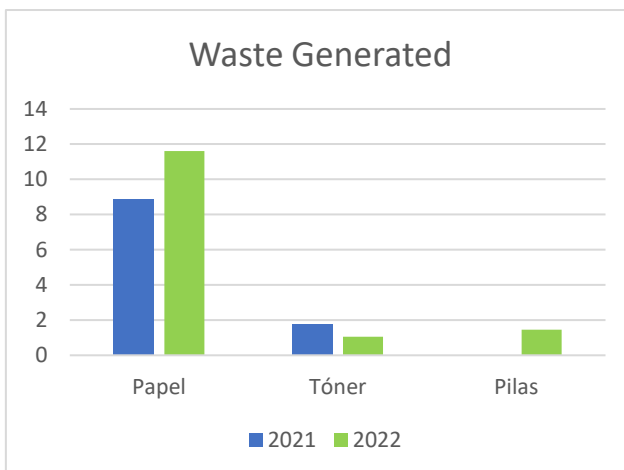

CONSUMPTION OF PLASTIC PACKAGING

During 2022, the consumption of plastic containers has remained stable, with values similar to those of 2021. However, in absolute values, the consumption of this type of container has been reduced, specifically by 4%.

WASTE GENERATED: PAPER, TONER

WASTE PAPER, TONER AND BATTERIES

Regarding waste, in 2022 we have slightly increased the amount of paper (measured in kg per worker), specifically by 31%, mainly due to the cleaning tasks that have been carried out due to the imminent transfer of offices.

On the other hand, the generation of toner waste (measured in the number of cartridges collected per worker) has decreased by 40%, since fewer and fewer documents are being printed. In 2022 we have started to account for battery waste, occasionally produced in office work.

CASA ÁLVAREZ, with the aim of minimizing its impact on the environment set the following improvement objectives in 2022, which it successfully achieved:

Maintain environmental/sustainable management in the organization with the certification of the company in the UNE-EN ISO 14001:2015 standard

Renew the fleet of commercial vehicles with hybrid cars, which reduce fuel consumption favoring environmental performance
